The present sequence represents an analogue, MCP-1 (9-76), of monocyte chemoattractant protein-1 (MCP-1). The analogue, which lacks the chemoattractant protein-1 (MCP-1). The analogue, which lacks the N-terminal annio acids 1-8 of MCP-1). The analogue is the protein activity and inhibits binding to a MCP-1 as it lacks MCP-1 biological activity and inhibits binding to a MCP-1 receptor. The analogue is useful as a nati-inflammatory agent to block the effects of MCP-1 which is an inflammatory mediator causing migration of monocytes and other cells e.g. basophils and lymphocytes into inflammation sites. MCP-1 has been implicated in allergic and chronic inflammatory diseases e.g. arthritis, arteriosclerosis and several lung diseases. The analogue competes more effectively with MCP-1 for binding Chemical MCP-1 receptors than prior art mutant versions of MCP-1 e.g. preferably with 75:1 for prior art mutant 7ND.

Sequence 68 AA;
                                                                                                                                                            The present sequence represents an analogue, MCP-1 (11-76), of monocyte chemoattractant protein-1 (MCP-1). The analogue, which lacks the chemoattractant protein-1 (MCP-1). The analogue, which lacks the N-terminal amino acids 1-10 of MCP-1, acts as an antagonist of MCP-1 as it lacks MCP-1 biological activity and inhibits binding to a MCP-1 receptor. The analogue is useful as an anti-inflammatory agent to block the effects of MCP-1 which is an inflammatory mediator causing migration of monocytes and other cells e.g. basophils and lymphocytes into inflammatory diseases. MCP-1 has been implicated in allergic and chronic inflammatory diseases. G. arthritis, arteriosclerosis and several lung diseases. The analogue competes more effectively with MCP-1 for binding MCP-1 receptors than prior art mutant versions of MCP-1 e.g. preferably providing 50% inhibition of binding at a 25:1 ratio or less, compared with 75:1 for prior art mutant 7ND.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   N-terminally truncated monocyte chemo:attractant protein-1 (MCP-1) - lacks MCP-1 activity and inhibits receptor binding, useful as

chemoattractant protein-1 (MCP-1). The analogue, which lacks the N-terminal amino acids 1-7 of MCP-1, acts as an antagonist of MCP-1 acts as an antagonist of MCP-1 receptor. Biological activity and inhibits binding to a MCP-1 receptor. The analogue is useful as an anti-inflammatory agent to block the effects of MCP-1 which is an inflammatory mediator causing migration of monocytes and other cells e.g. basophils and lymphocytes into inflammatory diseases e.g. arthritis, arteriosclerosis and several lung MCP-1 receptors than prior att mutant versions of MCP-1 e.g. preferably with MCP-1 for binding providing 50% inhibition of binding at a 25:1 ratio or less, compared Sequence 69 AA;
                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Monocyte chemoattractant protein-1 (MCP-1) derivatives are mutated such that they inhibit the monocyte chemoattractant activity of endogenous MCP-1, provided that the derivative has not been modified by the substitution of 28-Tyr by Leu and/or 30-Arg by Val. Preferred mutations are: (1) substitution of 28-Tyr by aspartate; (2) substitution of 24 Arg by Phe; (3) substitution of 3-Asp by Ala; and/or (4) deletion of anino derivative based on the parent protein disclosed in Rollins, Molecular The peptides can be used to prevent restenosis, e.g. in patients

Anti-sense Monocyte Chemotactic Protein-1 oligo:nucleotide(s) -
useful for therapy or diagnosis of restenosis, etc.
Disclosure, Column 13-14; 16pp; English.

This is the amino acid sequence of the human monocyte chemoattractant
protein (MCP)-1, a member of the C-C chemokine family. MCP-1 is a potent
strimulator of monocyte chemotaxis and is produced by injured vascular
smooth cells thus attracting monocytes and macrophages which infiltrate
the injured area and release growth factor. This causes proliferation of
the vascular smooth cells resulting in restenosis. The gene sequence can
be used to generate antisense sequences e.g. T48093-7, which can be used
to inhibit in vitro MCP-1 produ. by monounclear cells e.g. lymphocytes or
macrophages, or smooth muscle cells, esp. in order to prevent vascular
                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                      therapeutic effect on skin wounds and ulcers.

Disclosure, Page 12; 22pp; Japanese.
The invention relates to a new remedy for curing wounds which, instead of comprising a growth factor, comprises a monocyte chemotactic activating factor (MOAF) or its variants or derivatives. The factor has potent effect on skin wounds and ulcers. The present sequence is human MCAF, the activity of which is exemplified as the new remedy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

Radio.labelling neutrophil-activating peptide(s) - for imaging targetted delivery of radioactive agent with a represents mature human monocyte chemoattractant protein-1 with a main and a method for imaging a target site in vivo in an animal. Labelled MCP-1 was allowed to accumulate at a target site (having MCP-1 receptors) in the animal can detected so as to image the target site. Any Cys-Cys or Cys-Xaa-Cys chemokine carrying either iodine-123 or iodine-131 can be used in the method. Especially preferred is neutrophil activating peptide-2 (NAP-2) which recognises interleukin-8 receptors and is labelled with the method can be used for imaging a site of infection, inflammation, and a patheromatous lesion or restenosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Macrophage chemoattractant peptide designated GDCF-2.

Disclosure; page 3; 46pp; English. Peptide is derived from glioma cell line U-105MG (ATCC CRL9932) or from leukocytes and has mol. wt. 8400. Used to treat infections and neoplasms.
                                                                                 Claim 1; Column 27; 21pp; English.

The present sequence represents a monocyte chemoattractant peptide (MCP) designated ODCF-2. MCPS can be isolated from human glioma cell line 0-105MG (e.g. present sequence) and peripheral blood mononuclear leukocytes. MCPs are used for the treatment of neoplasms and infections in humans. Short peptides derived from MCPs can be screened to identify those that can bind to the monocyte receptor without stimulating a chemotactic response. These are potentially useful for treating inflammation associated with monocyte infiltration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New peptide with specific chemotactic activity for monocytes - isolated from glioma or leucocyte cells, useful for treating infections and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

Thatt-sense monocyte chemotactic protein-1 oligo:nucleotide(s) and that.sense monocyte chemotactic protein-1 oligo:nucleotide(s) and peptide(s) - is used for inhibiting, treating or imaging areas of vascular restenosis or potential restenosis.

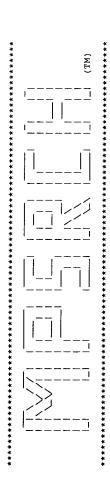

Pisclosure: Page 5: 42pp: English.

The sequences given in R53389 99 respecant sense and antisense monocyte chemotactic protein-1 (MCP-1) respectively. These cliponucleotides may be labelled with a radionuclide and use therapeutically for the treatment of vascular restenosis.

Radiolabelled antisense MCP-1 compounds may be constructed using high energy alpha or beta emitting isocopes rather than the gamma of mitters cutomarily used for diagnostic purposes. Antisense MCP-1 compounds are not attracted to inhibit production of MCP-1 so that compounds are not attracted to the area of vascular injury and sequence 76 AA; sequence 76 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;

-! SUBCELLULAR LOCATION: EXTRACELLULAR.
-: TISSUE SPECIFICITY: EXPRESSED CONSTITUTIVELY IN THE THYMUS.

EXPRESSION INDUCTIBLE IN THE LUNG (TYPE I ALVEOLAR EPITHELIAL CELLS), INTESTINE, HEART, SPLEEN, KIDNEY.
-! PIMOCTION: BY INTERFERON-GAMMA AND LIPOPOLYSACCHARIDE (LPS).
-! PIMI. O-GLYCOSYLATED (PROBABLE).
-! SIMILARITY: BELONGS TO THE INTERCRINE BETA FAMILY (SMALL CYTOKINE C-C) (CHEMOKINE CC).

"Structural characterization of a monomeric chemokine: monocyte
chemoattractant protein-3."

FEBS LETT. 395:277-282(1996).

-! FUNCTION: CHEMOROTIC FACTOR THAT ATTRACTS MONOCYTES AND BASOPHILS
BUT NOT NEUTROPHILS OR EOSINOPHILS. AUGMENTS MONOCYTE ANTI-TUMOR
ACTIVITY. HAS BEEN IMPLICATED IN THE PATHOGENESIS OF DISEASES
CHARACTERIZED BY MONOCYTIC INFILTRATES, LIKE PSORIASIS, RHEUMATOID
ARTHRATIS OR ATHEROSCLEROSIS. MAY BE INVOLVED IN THE RECRUITMENT
OF MONOCYTES INTO THE ARTERIAL WALL DURING THE DISEASE PROCESS OF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -!- SUBUNIT: MONOMER OR HOMODIMER; IN EQUILIBRIUM.
-!- PTM: PROCESSING AT THE N-TERMINUS CAN REGULATE RECEPTOR AND TARGET CELL SELECTIVITY. DELETION OF THE AMINO- TERMINAL RESIDION CONVERTS IT FROM AN ACTIVATOR OF BASOPHIL TO AN EOSINOPHIL CHEMOATTRACTANT.
-!- SIMILARITY: BELONGS TO THE INTERCRINE BETA FAMILY (SMALL CYTOKINE C-C) (CHEMOKINE CC).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              MEDLINE: 96195223.

-!-FUNCTION: CHEWOTACTIC FACTOR THAT ATTRACTS MONOCYTES, IXMPHOCYTES,
BASOPHILS AND EOSINOPHILS, BUT NOT NEUTROPHILS. SIGNALS THROUGH
CCRSD AND CCRS RECEPTORS. PLAYS A ROLE IN THE ACCUMULATION OF
LEUKOCYTES AT BOTH SIDES OF ALLERGIC AND NONALLERGIC INFLAMMATION.
MAY BE INVOLVED IN THE RECRUITMENT OF MONOCYTES INTO THE ARTERIAL
WALL DURING THE DISEASE PROCESS OF ARTHEROSCLEROSIS. MAY PLAY A
ROLE IN THE MONOCYTE ATTRACTION IN TISSUES CHRONICALLY EXPOSED TO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               -1- PTM: ONE MAJOR ISOFORM MCP-4, AND TWO MINOR ISOFORMS (LA)MCP-4 AND (FNDQGLA)MCP-4 ARE PRODUCED BY DIFFERENTIAL SIGNAL CLEAVAGE. (LA)MCP-4 IS ABOUT 30 FOLD LESS ACTIVE THAN MCP-4.
-1- SIMILARITY: BELONGS TO THE INTERCRINE BETA FAMILY (SMALL CYTOKINE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MASS SPECTROMETRY: MW-9314; MW_ERR=30; METHOD=MALDI; RANGE=17-98. MASS SPECTROMETRY: MW-8760; MW_ERR=30; METHOD=MALDI; RANGE=22-98. MASS SPECTROMETRY: MW-875; MW_ERR=30; METHOD=MALDI; RANGE=22-98. INDUCTION: BY INTERLEDES: MW_ERR=30; METHOD=MALDI; RANGE=24-98. INDUCTION: BY INTERLEDES: MW_ERR=30; METHOD=MALDI; RANGE=24-98. INSUE SPECIFICITY: WIDELY EXPRESSED. FOUND IN SMALL INTESTINE, THYMOS, COLON, LUNG, TRACHEA, STOMACH AND LYMPH NODE. LOW LEVELS SEEN IN THE PULMONARX RATERY SMOOTH MUSCLE CELLS.
                                                                                                        MEDLINE; 97341179.

Nucleic acids encoding secreted proteins from clones within ATCC 98076 - useful as immuno-modulators, anti-proliferative agents, 19076 - useful as immuno-modulators, anti-proliferative agents, requilators of cell differentiation and tissue growth, etc claim 26; Page 68; 99pp; English.

The present sequence represents the amino acid sequence of a secreted protein encoded by clone AM262_11. The clone was isolated from a human fetal kidney con alibrary using probe 705756. AM262_11 has some identity with the human ectaxin precursor gene and protein. As such, the AM262_11 protein may share some activity. The nucleic acid can be used for expression of recombinant proteins, as tissue, and sources of probes and primers. They can also be used to generate and sources of probes and primers. They can also be used to generate and sources of probes and primers. They can also be used to generate anti-protein or anti-bNA antibodies and as components of interaction trap assays etc. The protein is useful for raising antibodies, as immunoassay reagents and as nutritional supplements. The protein may possibly have any of a great variety of therapeutic activities. 05-JUN-1998 (first entry)
Amino acid sequence of the secreted protein encoded by clone AM262_11.
Secreted protein; antibody; immunoassay reagent;
nutritional supplement; therapeutic activity; eotaxin precursor. 11-DEC-1997.

The sequences given in W00667-68 represent pancreas-derived chemokines, PANEC-1 and PANEC-2. These chemokines are highly expressed and specifically expressed in the pancreas and may therefore be used in diagnostic assays based on chemokine production in cases of inflammation or disease affecting the pancreas. These assays allow the early and accurate diagnosis of pancreatic disorders, and can differentiate between invasive diseases and genetic syndromes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        treating asthma and other inflammatory diseases.
Claim 6; Page 31; 50pp; English.
Ebtaxin is useful for treatment of asthma or other diseases with an inflammatory component, especially accumulation of eosiniphils, e.g. rhinitis or eczema. Eotaxin is obtainable from bronchoalveolar lavage fluid of a subject after antigen challenge; from an inflammatory exudate fluid or from an in vitro culture of macrophages, lymphocytes, neutrophils, mast cells, airway cells, sequence 73 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                         Claim 2: Pages 27-28: 45pp; Japanese.

The present sequence is the human eosinocyte, CC type
Chemokine, eotaxin, which increases calcium flux in human
eosinocytes and is a human analogue of guinea pig eotaxin. The
eotaxin was derived from human small intestine, and is a specific
agonist for human CC type chemokine receptor 3. It may be used to
screen potential agonists and antegonists, which may be used to
anti-inflammatories. An anti-eotaxin antibody may be used in
diagnostic assays for eotaxin, which is implicated in inflammatory
discorders, e.g. asthma, other allergies and atopic skin
                                                                                                            Human CC chemokine (eotaxin) active on eosinocytes - useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Isolated chemo:attractant protein, termed eotaxin - useful for treating asthma and other inflammatory diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

N-terminally truncated monocyte chemo:attractant protein-1 (MCP-1) - lacks MCP-1 activity and inhibits receptor binding, useful as anti-inflammatory agent.

Disclosure: Page 5: 27pp: English.

The present sequence represents an analogue, MCP-1 (10-76), of monocyte chemoattractant protein-1 (MCP-1). The analogue, which lacks the N-terminal amino acids 1-9 of MCP-1, acts as an antagonist of MCP-1 as it lacks MCP-1 biological activity and inhibits binding to a MCP-1 receptor. The analogue is useful as an anti-inflammatory agent to block the effects of WCP-1 which is an inflammatory madiator causing migration of the effects of WCP-1 which is an inflammatory madiator causing migration of the effects of WCP-1 which is an inflammatory madiator causing migration of the madiator madiator madiator causing migration of the madiator madiator causing migration of the madiator madiator
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     of monocytes and other cells e.g. basophils and lymphocytes into inflammation sites. MCP-1 has been implicated in allergic and chronic inflammatory diseases e.g. arthritis, arteriosclerosis and several lung diseases. The analogue competes more effectively with MCP-1 for binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Monocyte chemoattractant protein analogue MCP-1 (10-76).
Truncated monocyte chemoattractant protein-1; inhibitor;
receptor binding; anti inflammatory; basophil; lymphocyte; allergy;
chronic inflammatory disease; arthritis; arteriosclerosis;
                                                                                                                                                                                       Guinea pig eosinocyte CC type chemokine eotaxin. Guinea pig: eosinocyte; CC type; chemokine; eotaxin; calcium; skin; small intestine; agonist; screening; antagonist; inflammation; antibody; diagnosis; assay; disorder; asthma; allergy; atopic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Example 2; Pages 30-31; 45pp; Japanese.

The present sequence is the guinea pig eosinocyte, CC type chemokine, eotaxin, which increases calcium flux in guinea pig agonists and antagonists, which may be used to screen potential agonists and antagonists, which may be useful as anti-inflammatorles. An anti-eotaxin antibody may be used in diagnostic assays for eotaxin, which is implicated in inflammatory disorders, e.g. asthma, other allergies and atopic skin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human CC chemokine (eotaxin) active on eosinocytes - useful for screening for eotaxin (ant)agonist(s), e.g. for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

The present sequence represents an analogue, MCP-1 (11-76), of monocyte chemotracturation protein-1 (MCP-1). The analogue, which lacks the chemotracturant protein-1 (MCP-1), acts as an antagonist of MCP-1 as it lacks MCP-1 biological activity and inhibits binding to a MCP-1 as it lacks MCP-1 biological activity and inhibits binding to a MCP-1 receptor. The analogue is useful as an anti-inflammatory agent to block the effects of MCP-1 which is an inflammatory mediator causing migration of monocytes and other cells e.g. basophils and lymphocytes into inflammation sites. MCP-1 has been implicated in allergic and chronic inflammatory diseases. Granthisis, arteriosclerosis and several lung diseases. The analogue competes more effectively with MCP-1 for binding MCP-1 receptors than prior art mutant versions of MCP-1 e.g. preferably with 75:1 for prior art mutant 7ND.

The man monocyte chemo-attractant protein-1 (MCP-1) derivs. - are capable of inhibiting the monocyte chemo-attractant activity of reapable of inhibiting the monocyte chemo-attractant activity of endogenous MCP-1 and can be used to treat restenois.

The endogenous MCP-1 and can be used to treat restenois.

Solve the page 11, 22pp. English.

Wordyte chemoattractant protein-1 (WCP-1) derivatives are mutated such that they inhibit the monocyte chemoattractant activity of endogenous.

WCP-1, provided that the derivative has not been modified by the that they inhibit the monocyte chemoattractant activity of endogenous.

WCP-1, provided that the derivative has not been modified by the substitution of 28 Tyr by aspartate: (2) substitution of 28 Tyr by aspartate: (2) substitution of 24 Arg by Phe: (3) substitution of 3-Asp by Ala; and/or (4) deletion of amino acids 2-8. The present sequence is a specifically claimed human MCP-1 and Cellular Biology, Vol. 9, No. 11, pp. 4687-4695, Nov. 1989.

The peptides can be used to prevent restenosis, e.g. in patients squence 69 AA;
                                                                                                                                                                                                                                                                                                    receptor. The analogue is useful as an anti-inflammatory agent to block the effects of MCP-1 which is an inflammatory mediator causing migration of monocytes and other cells e.g. basophils and lymphocytes into inflammation sites. MCP-1 has been implicated in allergic and chronic inflammatory diseases e.g. arthritis, arteriosclerosis and several lung diseases. The analogue competes more effectively with MCP-1 for binding MCP-1 receptors than prior art mutant versions of MCP-1 e.g. preferably providing 50% inhibition of binding at a 25:1 ratio or less, compared sequence 68 AA:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

N'terminally truncated monocyte chemo:attractant protein-1 (MCP-1) - lacks MCP-1 activity and inhibits receptor binding, useful as anti-inflammatory agent claim 7; Page 5; 27pp; English.

The present sequence represents an analogue, MCP-1 (9-76), of monocyte chemoattractant protein-1 (MCP-1). The manalogue, which lacks the N-terminal amino acids 1-8 of MCP-1, acts as an antagonist of MCP-1 as it lacks MCP-1 biological activity and inhibits binding to a MCP-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents an analogue, MCP-1 (8-76), of monocyte chemoattractant protein-1 (MCP-1). The analogue, which lacks the n-terminal manno acids 1-7 of MCP-1, acts as an antagonist of MCP-1 as it lacks MCP-1 biological activity and inhibits binding to a MCP-1 receptor. The analogue is useful as an anti-inflammatory agent to block the effects of MCP-1 which is an inflammatory mediator causing migration of monocytes and other cells e.g. basophils and lymphocytes into inflammation sites. MCP-1 has been implicated in allergic and chronic inflammatory diseases e.g. arthritis, arteriosclerosis and several lung diseases. The analogue competes more effectively with MCP-1 for binding providing 50% inhibition of binding at a 25:1 ratio or less, compared with 75:1 for prior art mutant 7ND.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          01-JUL-1998 (first entry)
Macrophage chemoattractant peptide designated GDCF-2.
Monocyte chemoattractant peptide; MCP; MCP-1; treatment; neoplasm; infection; human; monocyte receptor; chemotactic response; inflammation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

Human monocyte chemo-attractant protein-1 (MCP-1) derivs. - are capable of inhibiting the monocyte chemo-attractant activity of endogenous MCP-1 and can be used to treat restenosis.

Stand 6. Page 11: 22pp; English.

Claim 6. Page 11: 22pp; English.

Monocyte chemoatractant protein-1 (MCP-1) derivatives are mutated such that they inhibit the monocyte chemoatractant activity of endogenous MCP-1, provided that the derivative has not been modified by the substitution of 28-Tyr by Leu and/or 30-Arg by Val. Preferred mutations or re: (1) substitution of 28-Tyr by aspartate; (2) substitution of 24-Arg by Phe; (3) substitution of 3-Asp by Ala; and/or (4) deletion of amino acids 2-8. The present sequence is a specifically claimed human MCP-1 acids 2-8. The present sequence is a specifically claimed human MCP-1 and Cellular Biology, Vol. 9, No. 11, pp. 4687-4655, Nov. 1989.

The peptides can be used to prevent restenosis, e.g. in patients
The present sequence refreshirs a monocyte chemoattractant peptide (MCP) designated GDCF-2. MCPs can be isolated from human glioma cell line U-105MG (e.g. present sequence) and peripheral blood mononuclear leukocytes. MCPs are used for the treatment of neoplasms and infections in humans. Short peptides derived from MCPs can be screened to identify those that can bind to the monocyte receptor without stimulating a chemotactic response. These are potentially useful for treating inflammation associated with monocyte infiltration.

useful for therapy or diagnosis of restenosis, etc.
Disclosure, column 13-14; 16pp; English.
This is the amino acid sequence of the human monocyte chemoattractant
protein (MCP)-1, a member of the C-C chemokine family. MCP-1 is a potent
stimulator of monocyte chemotaxis and is produced by injured vascular
smooth cells thus attracting monocytes and macrophages which infiltrate
the injured area and release growth factor. This causes proliferation of
the vascular smooth cells resulting in restenosis. The gene sequence can
be used to generate antisense sequences e.g. T48093-7, which can be used
to inhabit in vitro MCP-1 prodn. by mononuclear cells e.g. lymphocytes or
macrophages, or smooth muscle cells, esp. in order to prevent vascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human monocyte chemo-attractant protein-1 (MCP-1) derivs. - are capable of inhibiting the monocyte chemo-attractant activity of endogenous MCP-1 and can be used to treat restenosis.

Claim 5; Page 11; 22pp; English.

Monocyte chemoattractant protein-1 (MCP-1) derivatives are mutated such that they inhibit the monocyte chemoattractant activity of endogenous MCP-1, provided that the derivative has not been modified by the substitution of 28-Tyr by Leu and/or 30-Arg by Val. Preferred mutations by Phe; (3) substitution of 28 Tyr by aspartate; (2) substitution of 24 Arg by Phe; (3) substitution of 34-Asp by Ala; and/or (4) deletion of anino acids 2-8. The present sequence is a specifically claimed human MCP-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /note= "Arg in the native sequence is replaced by Phe"

```

```
Cc derivative based on the parent protein disclosed in Rollins, Molecular and Cellular Biology, Vol. 9, No. 11, pp. 4687-4695, Nov. 1989.

Cc The peptides can be used to prevent restenosis, e.g. in patients

Cc undergoing coronary artery angloplasty.

                                                                                                                                                                                                                                                                                                                                                                                                            "RATE CYPIB1: an adrenal cytochrome P450 that exhibits sex-dependent expression in livers and kidneys of TCDD-treated animals.";
CARCINGRESIS 16:1319-1327(1995).
-!- FUNCTION: CYTOCHROMES P450 ARE A GROUP OF HEME-THIOLATE
MUNOXYGENASES. IN LIVER MICROSOMES, THIS ENZYME IS INVOLVED IN AN
NADPH-DEPENDENT ELECTRON TRANSPORT PARIMAY. IT OXIDIZES A VARIETY
OF STRUCTURALLY UNRELATED COMPOUNDS, INCLUDING STEROIDS, FATTI
ACIDS, AND EXBORIOTICS.
-!- CATALYTIC ACTIVITY: RH + REDUCED FLAVOPROTEIN + O(2) = ROH +
OXIDIZED FLAVOPROTEIN + H(2)O.
                                                                                                          MEDLINE, 95263485.

                   #title IL-lalpha or tumor necrosis factor-alpha stimulate release of three NAP-1/IL-8-related neutrophil chemotactic proteins in human dermal fibroblasts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Schröeder, J.M.; Persoon, N.L.M.; Christophers, E. J. Exp. Med. (1990) 171:1091-1100
Lipopolysaccharide-stimulated human monocytes secrete, apart from neutrophil-activating peptide l/interleukin 8, a second neutrophil-activating protein. NH-2-terminal amino acid sequence identity with melanoma growth stimulatory activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      #domain signal sequence #status predicted #label SIG\

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         #journal J. Immunol. (1993) 150:1000-1010
#title Identification of a novel granulocyte chemotactic protein (GCP-2) from human tumor cells. In vitro and in vivo comparison with natural forms of GRO, IP-10, and IL-8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                JH0281 #type complete
macrophage inflammatory protein 2 alpha precursor - human
macrophage inflammatory protein beta; melanoma
gro-beta; growth regulated protein beta; melanoma
growth.stimulatory activity; monocyte adherence-induced
                                                                                                                                                                                                                              Golds, E.E.; Mason, P.; Nyirkos, P.
Biochem. J. (1989) 259:585-588
Inflammatory cytokines induce synthesis and secretion of protein and a neutrophil chemotactic factor but not beta-2--microglobulin in human synovial cells and fibroblasts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  #formal_name Homo sapiens #common_name man

                                                                       δ
                                                       There appears to be a second beta-thromboglobulin-like human gene.

There appears to be a second beta-thromboglobulin-like human gene.

Connective-tissue activating peptides (CTAP) are a group of proteins capable of activating connective tissue cells. CTAP-I.

II, -III and -P2, and -PMN are of lymphoid, tumor cell, human platelet, and polymorphonuclear leukcyte origin, respectively.

CTAP-III, a monomer isolated from platelets, stimulates DNA synthesis, mitosis, glycolysis, intracellular CAMP accumulation, prostaglandin E2 secretion, and synthesis of hyaluronic acid and sulfared glycosaminoglycan. It also stimulates the formation and secretion of plasminogen activator by human synovial cells.

Proteolytic removal of the first four residues of CTAP-III produces the active peptide beta-thromboglobulin, which is released from platelets along with platelet factor 4 and platelet-derived
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A.; Opdenakker, G.; Van Damme, J.
